DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect US Patent 6,371,749 to Thompson have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 33-38 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 4,122,223 to Civardi et al. as evidenced by US Patent 3,637,415 also to Chivardi et al.
4. The '223 patent teaches a method for curing a chemical agent deposited on a thin sheet of elastomeric polyurethane by passing the coated sheet through a nip to reduce the tension on the fabric and heating the sheet at a sufficient temperature for a sufficient time to cure the agent deposited on the sheet and then winding the fabric on a roll. Note column 8, line 51- column 9, line 39. The '415 patent shows that the sheet of polyurethane used in the '223 patent is a multiple component non-woven fabric (see column 5, lines 25-47) that appears to meet the definition of the term given in page 6 of the present specification, and the treatment temperature used in the method of the '223 patent is in the range of 15-30 degrees Celsius below the melt temperature of the fabric (see column 4, lines 61-63 of the '415 patent). The '223 patent does not teach the

specific tension values or line speed as presently claimed. However, it does teach applying "as little tension as possible" (column 9, line 1). Furthermore, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art (*In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980)), such values would have been obvious to one of ordinary skill in the art.

Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
